Done by Bintintan Andrei

Description

  This method allows printing **<TAG>** formatted text with line breaks. They can be automatic (as soon as the text reaches the right border of the cell) or explicit (via the **\n** character). As many cells as necessary are output, one below the other.

Text can be **aligned**, **centered** or **justified**. Different Font, *Sizes*, **Styles**, *Colors* can be used. The cell block can be framed and the background painted. The behavior/paramaters of the method are the same as to the FPDF Multicell method. **Links** can be used in any tag.

  TAB spaces (**\t**) can be used. The **ttags** tag name is reserved for the TAB SPACES.

  Variable Y relative positions can be used for $_{Subscript}$ or ^{Superscript}.

  Controlled Tab Space   *- Tab Space 1*

           - Tab Space 2

          - Tab Space 2

            - Tab Space 3

       - Tab Space 1

         - Tab Space 2

  If no **<TAG>** is specified then the FPDF current settings are used.

  Paragraphs can be used: *- Paragraph 1*

  50 units   *- Paragraph 1*

  60 units   - Long Long Text Within Paragraph!!! Don't USE JUSTIFIED ALIGN IN THIS CASE

  60 units   *- Paragraph 2*

                   Best Regards
